ITSE 2321 – OBJECT-ORIENTED PROGRAMMING (JAVA)
Program 11 – Strings

Dates are printed in several common formats. Two of the more common formats are:

<div align="center">

`04/12/2018` **and** `April 12, 2018`

</div>

Write a program that reads a date in the first format and prints it in the second format.
Do not accept invalid date format.

Run your program with the following data and copy and paste the output to a file:

```
04/12/2018
13/01/2000
02/29/2015
01/01/2014
09/31/2016
Today's Date (The day you are submitting the program)
```

Create a folder named, **fullname_program11**. Copy your source code and the output file to the folder. Zip the folder and upload it to Blackboard.
