COSC 1336 – Programming Fundamentals I
Program 1 – Arithmetic Expressions

An employee in your company earns $32,500.00 annually.   Write a program that determines and displays the amount of his/her gross pay for each pay period, if he/she is paid twice a month (24 pay checks per year) and if he/she is paid bi-weekly (26 check per year).   Use the template, **Program1-Template.py**, to complete this programming assignment.

Run the program and save the output as **Program1-output.py** (Do a "Save As" in the Python Shell Window and it will save as a ".py" file. See Appendix B of your Textbook for details).   Create a folder named, **Fullname_Program1**. Copy your source code and the output file to the folder. Zip the folder, as a **".zip"** file, and upload it to Blackboard.
